## Predgovor

Serijski *Musei Archaeologici Zagrabienensis et Monographiae* (Katalozi i monografije Arheološkoga muzeja u Zagrebu) pokrenuta je 2004. godine s ciljem da se javnosti prezentiraju pojedini segmenti iznimno bogatog fundusa koji se čuva u Arheološkom muzeju u Zagrebu. Do sada je u seriji objavljeno devet svezaka, u kojima su autori, mahom djelatnici Muzeja, na stručno-znanstveni način obradili dio spomeničkog fundusa iz zbirke Muzeja.

Numizmatička zbirka Arheološkog muzeja svojim je sadržajem bliža profilu kabineta. Broji više od 270 000 primjeraka metalnog novca, papirnih novčanica, medalja, spomenica, plaketa, značaka, kolajna, markica i žetona. Osnovna područja, koja pokrivaju i odgovarajući inventari, jesu: grčki (uključujući autonomni novac grčko-rimskih gradova) i keltski novac, rimski republikanski, rimski carski i bizantski novac, novac srednjeg i novijeg vijeka te medalje. Kao osobitu rijetkost, u svjetskim razmjerima bilo bi teško izdvojiti bilo koju od tih cjelina. Ipak, može se istaknuti izrazito bogata i vrijedna zbirka keltskog novca, zatim ilirsko-grčkog novca, pojedinih medalja i, svakako, skupni nalazi iz svih razdoblja.

U seriji je do sada objavljena numizmatička građa iz Bukove, autora dr. sc. Tomislava Bilića (Bukova – ostava srebrnog novca iz 15. i 16. st., Katalozi i monografije 8, Zagreb, 2011), a u svesku koji je pred vama obrađuje se ostava rimskog brončanog novca iz Treštanovaca kod Požege. Ostava je otkrivena kao slučajni nalaz 1938. godine, a u Arheološki muzej u Zagrebu dospjela je iste godine. Ostava sadrži 1846 primjeraka rimskog brončanog novca. Sastoji se od novca kovanog za rimskih vladara 4. st., Konstantina Velikog, Konstansa, Konstancija II., Konstantina II., Krispa, Decentija, Hanibalijana itd. Više od trećine novca kovano je u Sisciji, današnjem Sisku, što je od osobitog značenja za hrvatsku numizmatiku, ali i za arheologiju u cjelini, a zastupljene su i kovnice Tesalonika, Lugdunum, Sirmij itd.

Autor kataloga, koji je i obradio ostavu je Davor Margetić, a uvodno poglavlje potpisuje Tomislav Bilić, kustos i voditelj Numizmatičkog odjela Muzeja. Davor Margetić zaposlen je u zvanju znanstvenog savjetnika na Institutu Ruđer Bošković u Zagrebu, voditelj je laboratorija za fizikalno-organsku kemiju te se bavi teorijskom i fizikalno-organskom kemijom. Rođen je u Požegi te stoga niti ne začuđuje što je ljubav prema rodnom kraju odredila njegovo zanimanje za stari novac »Zlatne doline«. Zajedno s bratom (blizancem) Daliborom dijeli isti hobi – numizmatiku te je autor ili koautor 30 numizmatičkih članaka (popularni, stručni i izvorni znanstveni radovi) te oko 200 novinskih članaka.

Naposljetku, valja istaknuti i zahvaliti Gradskom uredu za obrazovanje, kulturu i šport Grada Zagreba te Ministarstvu kulture RH koji su od samog početka prepoznali važnost izlaženja ove serije te ju financijski podržali.

## Foreword

The series *Musei Archaeologici Zagrabienensis Catalogi et Monographiae* (*Catalogues and monographs of the Archaeological museum in Zagreb*) was initiated in 2004 in order to present to the general public certain segments of the exceptionally rich material kept in the Archaeological museum in Zagreb. Nine volumes were published thus far, in general authored by Museum curators, in which segments of archaeological material kept in the Museum collections were analysed.

The Numismatic collection of the Archaeological museum has a character of a numismatic cabinet. It keeps more than 270,000 specimens of metal coins, paper money, medals, memorials, plaques, badges, decorations, tokens and jettons. It is systematized into the following categories: Greek (including Roman period) and Celtic coinage, Roman Republican, Imperial and Byzantine coinage, mediaeval and modern coinage and also medals. It is hard to select any of these collections for its global importance. However, the rich collection of Celtic coinage, Greek-Illyrian coinage, medal collection and the hoards from all periods should be emphasized.

Numismatic material was already published in this series (T. Bilić: *Bukova – A hoard of 15<sup>th</sup> and 16<sup>th</sup> c. silver coins from Bukova near Virovitica*, *Catalogues and monographs* 8, Zagreb, 2011), while this volume analyses the hoard of Roman bronze coinage from *Treštanovci near Požega*.

The hoard was discovered by chance in 1938, and it arrived to the Archaeological museum in Zagreb the same year. It is composed of 1846 pieces of Roman bronze coinage issued by the 4<sup>th</sup> c. emperors Constantine the Great, Constans, Constantius II, Constantine II, Crispus, Decentius, Hannibalianus, etc. More than a third of the total number of coins were minted in Siscia, which is of special interest for Croatian numismatics and archaeology, while the rest were minted in Thessalonica, Lugdunum, Sirmium, etc.

The author of the catalogue, who also analysed the hoard, is Davor Margetić, while the introductory chapter was written by Tomislav Bilić, curator and the head of the Numismatic department of the Museum. Davor Margetić is employed as full-time researcher at the Ruđer Bošković Institute; he is the head of the Laboratory for physical-organic chemistry and his research interests in this field are centred on theoretical and physical-organic chemistry. He was born in Požega, thus it seems that the love for the region of his birth determined his interest in ancient coinage of the »Golden Valley«. He shares this interest with his twin brother Dalibor, and has authored or co-authored 30 numismatic articles (popular, professional and original scientific papers) and some 200 newspaper articles.

Finally, I would like to thank the Office for education, culture and sports of the City of Zagreb and the Ministry of culture of Republic of Croatia for both recognizing the importance of publishing this series and supporting it financially.

## Rimskodobno nalazište na Treštanovačkoj Gradini

Selo Treštanovci u Požeškoj kotlini, »najljepši i najplodniji dio cijele Požeške kotline«,<sup>1</sup> poznato je kao nalazište rimskih arheoloških predmeta (t. j. novca) još od 18. st. Dvojica učenih svećenika, bivših isusovaca, Mathias Piller, profesor prirodoslovja i Ludwig Mitterpacher, profesor agronomije, obojica s Kraljevskog sveučilišta u Budimpešti, proputovali su Požešku županiju 1782. god. Tako su zapisali da upravitelj imanja u Mitrovici (današnje Trenkovo) posjeduje nešto rimskog novca nađenog u Treštanovcima.<sup>2</sup> Točno mjesto u selu gdje je taj novac nađen nije poznato, no neslužbeni muzejski povjerenik, barun Milan Turković Kutjevački, izvijestio je 1898. god. o iskapanjima na Treštanovačkoj gradini. Zabilježio je postojanje rimske arhitekture, točnije kupelji, nešto novaca, kao i nalaz skulpture.<sup>3</sup> I na taj se način nalazište Treštanovačka gradina prvi put pojavljuje u arheološkoj literaturi. No to mjesto je bilo naseljavano već u ranom brončanom dobu, kao što to dokazuje keramika, otkrivena tijekom sustavnih arheoloških iskapanja.<sup>4</sup>

Nadalje, moguće je da se opis rimskih ostataka u selu Vetovo između Kutjeva i Velike, koji nam daje Matija Petar Katančić (1750.–1825.) u stvari odnosi na Treštanovačku gradinu.<sup>5</sup> U

<sup>1</sup> Pismo M. Turkovića od 22. siječnja 1900. naslovljeno na J. Brunšmida, čuva se u arhivu Arheološkog muzeja u Zagrebu, s.v. *Treštanovci* (dokument br. 4051/1900).

<sup>2</sup> '... monetas apud se servat, quae, cum novitate se non comendent, eo pretiosae sunt, quod in Terstjanovczi possessionis Velicensis vico sint repertae' (PILLER i MITTERPACHER 1783: 76; SRŠEN 1995: 92 (latinski), 93 (hrvatski). Usp. BULAT 1975: 82; VEJVODA i ŠTIMAC (=ŠMIC) 1977: 91; SOKAČ-ŠTIMAC 1984b: 134, 1995: 175, 2005b: 4; MARGETIĆ i MARGETIĆ 2007: 38).

<sup>3</sup> TURKOVIĆ 1898: 242–243, ad 18, izvješće datirano 26. listopada 1898. On također spominje postojanje ostataka rimske ceste u Treštanovcima (TURKOVIĆ 1898: 242, ad 17, izvješće datirano 2. kolovoza 1898). Usp. SOKAČ 1972: 98; LANGHAMER 1972: 26; SOKAČ-ŠTIMAC i BULAT 1974: 116; BULAT 1975: 82; PINTEROVIĆ 1973–1975: 130; VEJVODA i ŠTIMAC (=ŠMIC) 1977: 91; SOKAČ-ŠTIMAC 1984a: 123, 1984b: 134, 1995: 174, 176, 2005b: 2, 4; MARGETIĆ i MARGETIĆ 2007: 38–39.

<sup>4</sup> SOKAČ-ŠTIMAC 2005b: 8.

<sup>5</sup> To je barem bilo Brunšmidovo (1898: 204n1) i Bulatovo (1975: 82) mišljenje. Gradina u stvari leži mnogo bliže selu Tekiću, u biti, sjeverno od njega (SOKAČ-ŠTIMAC i BULAT 1974: 116; BULAT 1975: 82), a ono je samo sjeverno od Treštanovaca; stoga je gradina mnogo bliža Vetovu nego Treštanovcima.

## The Roman-period site on the Treštanovci hillfort

The village of Treštanovci in the Valley of Požega, 'the most beautiful and fertile location in the entire Požega valley',<sup>1</sup> was known as the find site of archaeological material of Roman origin (namely, coins) as early as the 18<sup>th</sup> c. Two scientifically-minded (former Jesuit) priests, Mathias Piller, professor of natural history and Ludwig Mitterpacher, professor of agriculture, both affiliated with the Royal University in Budapest, travelled through the Požega County in 1782 and recorded that the estate manager in Mitrovica (modern Trenkovo) keeps some Roman coins that were found in Treštanovci.<sup>2</sup> It is not known from where exactly at the village the coins were found, but an unofficial commissioner of the Archaeological Museum in Zagreb, baron Milan Turković of Kutjevo, reported in 1898 on excavations at the Treštanovci hill fort. He noted the existence of Roman architecture, more precisely, baths, as well as some coins and sculpture.<sup>3</sup> Thus the site of Treštanovci hill fort appears for the first time in literature. But the site itself was inhabited already during the Early Bronze Age, as indicated by the pottery found in systematic archaeological excavations.<sup>4</sup>

However, it is possible that the description of Roman remains at the village of Vetovo between Kutjevo and Velika given by Matija Petar Katančić (1750–1825) actually referred to the Treštanovci hill fort.<sup>5</sup>

<sup>1</sup> The letter of M. Turković of January 22<sup>nd</sup>, 1900 addressed to J. Brunšmid kept in the archives of the Archaeological Museum in Zagreb, s.v. *Treštanovci* (document no. 4051/1900).

<sup>2</sup> '... monetas apud se servat, quae, cum novitate se non comendent, eo pretiosae sunt, quod in Terstjanovczi possessionis Velicensis vico sint repertae' (PILLER and MITTERPACHER 1783: 76; SRŠEN 1995: 92 (Latin), 93 (Croatian). Cf. BULAT 1975: 82; VEJVODA and ŠTIMAC (=ŠMIC) 1977: 91; SOKAČ-ŠTIMAC 1984b: 134, 1995: 175, 2005b: 4; MARGETIĆ and MARGETIĆ 2007: 38).

<sup>3</sup> TURKOVIĆ 1898: 242–243, ad 18, report dated October, 26<sup>th</sup>, 1898. He also mentioned the existence of some remains of a Roman road at Treštanovci (TURKOVIĆ 1898: 242, ad 17, report dated August, 2<sup>nd</sup>, 1898). Cf. SOKAČ 1972: 98; LANGHAMER 1972: 26; SOKAČ-ŠTIMAC and BULAT 1974: 116; BULAT 1975: 82; PINTEROVIĆ 1973–1975: 130; VEJVODA and ŠTIMAC (=ŠMIC) 1977: 91; SOKAČ-ŠTIMAC 1984a: 123, 1984b: 134, 1995: 174, 176, 2005b: 2, 4; MARGETIĆ and MARGETIĆ 2007: 38–39.

<sup>4</sup> SOKAČ-ŠTIMAC 2005b: 8.

<sup>5</sup> At least this was the opinion of Brunšmid (1898: 204n1) and Bulat (1975: 82). The hill fort is actually much closer to the village of Tekić, in fact, north of that village (SOKAČ-ŠTIMAC and BULAT 1974: 116; BULAT 1975: 82), which is itself north of Treštanovci; thus, the hill fort is actually much nearer to Vetovo than Treštanovci.

**Karta 1:** položaj Treštanovačke gradine SI od Tekića (1:5000)

istome broju muzejskoga glasila Josip Brunšmid analizirao je Turkovićev izvještaj te je posebnu pažnju posvetio novcu i dvjema mramornim glavama s nekog rimskog nadgrobnog spomenika.<sup>6</sup> Iste je godine tamošnji pravoslavni svećenik Kosta Mešterović poslao Brunšmidu tlocrte dviju rimskih građevina na gradini – uključujući »rimsku kupelj«, a dvije godine poslije Turković je Muzeju poslao još jedno pismo, u kojemu opisuje kako su cijelo selo Treštanovci, skupa s njegovom pra-

In the same issue of the Museum journal, Josip Brunšmid analyzed Turković's report, giving special notice to coins and two marble heads from a Roman sepulchral monument.<sup>6</sup> In the same year the local Orthodox priest Kosta Mešterović had sent to Brunšmid ground plans of two Roman buildings on the hill fort – including 'Roman baths', while two years later Turković addressed another letter to the Museum in which he reported that the entire village of Treštanovci, together with its Orthodox church and the surrounding villages, were built using Roman construction material from the

voslavnom crkvom, kao i okolna sela, sagrađeni od ostataka rimske arhitekture s Gradine.<sup>7</sup> Arheološki nalazi čuvali su se u Turkovićevoj arheološkoj zbirci u Kutjevu i kasnije su uništeni u požaru kutjevačkog dvorca.

God. 1938. Josip Klemenc, kustos Arheološkog muzeja u Zagrebu rekognoscirao je područje Treštanovaca i predložio postojanje rimskog vojničkog logora i civilnog naselja.<sup>8</sup> Iste je godine članak objelodanjen u zagrebačkim novinama *Novosti*, prenesen u lokalnim novinama,<sup>9</sup> izvijestio da je Klemenc u Treštanovcima, najvjerojatnije na Gradini u stvari otkrio ostatke rimskoga grada Incerum, s ulicama, jarcima itd.<sup>10</sup> Te tvrdnje, uključujući identifikaciju Inceruma s Treštanovačkom gradinom, možemo naći i u Klemenčevu izvješću, koje se čuva u arhivu Odjela za numizmatiku Arheološkog muzeja u Zagrebu.<sup>11</sup> Klemenc je na obilazak toga kraja prvenstveno potaknuo važni nalaz ostave u Treštanovcima u veljači iste godine, a ona je i tema ove studije. Budući da je sam autor potanko opisao okolnosti nalaza (skupnog nalaza novca i popratnog

Gradina (hill fort).<sup>7</sup> Archaeological material from the site was kept in Turković's archaeological collection in Kutjevo until castle destruction by fire.

In 1938, Josip Klemenc of the Archaeological Museum in Zagreb, surveyed the area of Treštanovci and suggested the existence of a Roman military camp and civil settlement.<sup>8</sup> An article in the Zagreb-based paper the *Novosti*, reprinted in a local newspaper,<sup>9</sup> reported in the same year that Klemenc had actually found in Treštanovci, most probably at the hill fort, the remains of the Roman town of Incerum, with streets, ditches, etc.<sup>10</sup> These claims, including the identification of Incerum with the Treštanovci hill fort, are also present in Klemenc's report kept in the archives of the Numismatic department of the Archaeological Museum in Zagreb.<sup>11</sup> Klemenc was motivated to visit this area, in the first place, by the important find of the Treštanovci hoard in the February of that year, which is the object of this study. Since the author describes extensively the circumstances of the find (both the coin hoard and accompanying

<sup>7</sup> Pismo se čuva u arhivu Arheološkog muzeja u Zagrebu, s.v. *Treštanovci* (spis br. 4051/1900). Usp. SOKAČ-ŠTIMAC 1984b: 134.

žeške kotline. God. 1968. otkriven je u Treštanovcima skeletni grob s arhitekturom i skromnim grobnim priložima.<sup>12</sup> Taj je nalaz bio posebno ključan za početak sustavnih iskopavanja na Treštanovačkoj gradini, koja su rezultirala u otkriću kasnorimskog groblja iz konca 4. st. po. Kr. Tijekom prvih iskopavanja nađeno je deset grobova,<sup>13</sup> a u drugoj sezoni iskopavanja sveukupno 23 groba (sa 24 kostura), najčešće s grobnim priložima. Istraživači su smatrali da je nekropola pripadala gradu Incerum te da se tu pokapalo autohtono romanizirano stanovništvo, kao i novonadošli Ostrogoti.<sup>14</sup> Tijekom kampanja 1973. i 1975. god. nastavljeno je s iskopavanjima nekropole. Za tih kampanja iskopano je 19, odnosno 22 groba s povremenim grobnim priložima.<sup>15</sup> Na toj je nekropoli od 1972.–1981. god. pronađen sveukupno 101 grob iz rimskog vreme-

chitecture and modest grave goods was fortuitously found in Treštanovci.<sup>12</sup> This find in particular initiated the beginning of the systematic excavations West of the Treštanovci hill fort with the effect of the discovery of a late Roman necropolis, dating from the late 4<sup>th</sup> c. Ten graves were found during the first campaign,<sup>13</sup> while another twenty-three skeletal graves in total were found during the second (with 24 skeletons), mostly accompanied by grave goods. The excavators believed that this necropolis belonged to the town of Incerum, and that both the autochthon Romanized population and Ostrogothic newcomers were buried here.<sup>14</sup> During the campaigns in 1973 and 1975 the excavations of the necropolis continued. Nineteen and 22 graves with occasional grave goods were found in these campaigns, respectively.<sup>15</sup> In total, 101 Roman-period graves were found in this necropolis from 1972–1981.<sup>16</sup>

na.<sup>16</sup> Arheološka iskopavanja nastavljena su 2004. god. i iskopana 23 nova groba, ali i cesta koja je vodila k nekropoli.<sup>17</sup> Tako su u razdoblju između 1972. i 2004. god. u cijelosti iskopana 125 groba,<sup>18</sup> dok je deset grobova iskopano 2005. god.<sup>19</sup> Isto tako se počelo iskopavati i na gradini, prvi put 1973. god., a nastavilo u sezonama 1976. i 1979. god.<sup>20</sup> Istraživači su izvijestili o nalazu jedne vile rustike<sup>21</sup> te stambenog objekta s bazenom.<sup>22</sup> U cijelosti su od 1973. do 1981. god.<sup>23</sup> otkopani temelji triju građevina. Ponovno su istraživači bili uvjerenja da su ovdje našli rimski grad Incerum.<sup>24</sup> Jedan od najvažnijih nalaza bio je ulomak tere sigilate s lončarskim žigom QVARTINVS, iz sredine 2. st. po. Kr. Tako je naselje bilo nastavano od sredine 2. st. sve do konca 4. st. po. Kr.<sup>25</sup> Tu dataciju su naknadno poduprli novčani nalazi (Hadrijan-Gracijan),<sup>26</sup> iz javnih rimskih kupelji, otkriveni istočno od nekropole tijekom iskopavanja 2006. god.<sup>27</sup> Iskopavanja kupelji nastavljena su 2007. god.; nađeni su ulomci tere sigilate sa žigovima iz 2. i 3. st., a među drugim materijalom još

Archaeological excavations on the necropolis continued in 2004, with 23 new graves being excavated, but also a road leading to the necropolis.<sup>17</sup> Thus, in the period between 1972 and 2004 125 graves were excavated in total,<sup>18</sup> while ten new graves were excavated in 2005.<sup>19</sup> In the same time the hill fort was excavated for the first time in 1973, with the repeated campaigns in 1976 and 1979.<sup>20</sup> The excavators have reported the find of a villa rustica<sup>21</sup> and a residential object with a pool.<sup>22</sup> In total, the foundations of three buildings were excavated from 1973 to 1981.<sup>23</sup> The excavators also believed to have found the Roman town of Incerum here.<sup>24</sup> One of the most important finds was a terra sigillata fragment with a potter's stamp QVARTINVS, dating from the mid-2<sup>nd</sup> c. Thus the settlement was functioning from the mid-2<sup>nd</sup> to the end of the 4<sup>th</sup> c.<sup>25</sup> This dating was subsequently supported by coin finds (Hadrian-Gratian)<sup>26</sup> in Roman public baths discovered east of the necropolis in the excavations in 2006.<sup>27</sup> The excavations of the baths were continued in 2007; fragments of terra sigillata with 2<sup>nd</sup> and 3<sup>rd</sup>-c. stamps, among other material, were found in this campaign, to-

**Slika 4a–b:** Brončana vaga i olovna votivna pločica s Treštanovačke gradine (SOKAČ-ŠTIMAC and KORAČ 2007b: 6; SOKAČ-ŠTIMAC 2005b: 9)

**Figure 4a–b:** Bronze scales and lead votive plaque from the Treštanovci hill fort (SOKAČ-ŠTIMAC and KORAČ 2007b: 6; SOKAČ-ŠTIMAC 2005b: 9)

novca od 2. st. (Antonin Pio) do 4. st. po. Kr.<sup>28</sup> Još jedan zanimljivi arheološki predmet olovna je votivna pločica, s prikazima Sola, zmije i lava, što ukazuje na mitraički sadržaj, datirana u 2. ili 3. st. po. Kr., pronađena 1984. god.<sup>29</sup>

Već smo spomenuli da su istraživači Treštanovačke gradine Mirko Bulat, kustos Muzeja Slavonije u Osijeku i Dubravka Sokač-Štimac, kustos Muzeja Požeške kotline u Požegi, kao i Josip Klemenc, kustos Arheološkoga muzeja u Zagrebu, koji je taj kraj posjetio 1938. god., smatrali da je u slučaju tog nalazišta riječ o rimskom gradu Incerumu. Njihovo je mišljenje preuzela nekolicina kasnijih pisaca,<sup>30</sup> među kojima su najvažniji sastavljači *Barrington Atlas of the Greek and Roman World*.<sup>31</sup> Grad tog imena spominje se samo u Antoninovom itineraru.<sup>32</sup> Smješten je na cestama Siscia – Sirmium (preko

gether with more 2<sup>nd</sup> (Antoninus Pius) to 4<sup>th</sup> c. coins.<sup>28</sup> Another important archaeological object is a lead votive plaque found in 1984, with representations of Sol, snake and lion, suggesting a Mithraic context, dated to the 2<sup>nd</sup> or 3<sup>rd</sup> c.<sup>29</sup>

We have already noted that the excavators of the Treštanovci hill fort, Mirko Bulat, curator at the Museum of Slavonija in Osijek and Dubravka Sokač-Štimac, curator at the Požega City Museum, as well as Josip Klemenc, curator at the Archaeological Museum in Zagreb who visited the area in 1938, believed it to be the site of the Roman town of Incerum. Their opinion is supported by a number of later authors,<sup>30</sup> most notably by the contributors to the *Barrington Atlas of the Greek and Roman World*.<sup>31</sup> The town of this name is mentioned only in the *Antonine Itinerary*.<sup>32</sup> It was situated on the Siscia

<sup>28</sup> SOKAČ-ŠTIMAC 2007: 114–115. Novac s tih iskopavanja objelodanili su MARGETIĆ i MARGETIĆ 2007. Jedan as Klaudija I nađen »u blizini sela Treštanovci i Radovanci (nedaleko Velike)« (MARGETIĆ i MARGETIĆ 2003: 66; SOKAČ-ŠTIMAC 2005b: 8) ne upućuje na mogućnost neke ranije nazočnosti Rimljana u tom kraju, budući da je dugo vremena bio u optjecaju, što se može zaključiti po njegovoj istrošenosti (za novac vidi: MARGETIĆ i MARGETIĆ 2003: 68, kat. br. 1).

<sup>29</sup> SOKAČ-ŠTIMAC 2005b: 9.

<sup>30</sup> VEJVODA i ŠTIMAC (=ŠMIC) 1977: 91; BOJANOVSKI 1993: 62–63; MINICHREITER 1989: 187 (ne postoji na Tabuli Peutingerijani!); SOKAČ-ŠTIMAC 2005b: 2; POTREBICA 2006: 45; HERMAN KAURIĆ 2004: 24; GRAČANIN 2010: 34–35, 2011: 33 (s nekim rezervama). Usp. PINTEROVIĆ 1973–1975: 124 koja Incerum smješta 'u Požega'.

<sup>31</sup> KOS i ŠAŠEL KOS 2000: 292.

<sup>32</sup> Za Itinerar vidi BUNBURY 1883: ii.694–696; TOZER 1897: 306–308; KUBITSCHKEK 1916: 2323.29–2352.20.

<sup>28</sup> SOKAČ-ŠTIMAC 2007: 114–115. The coins found in this campaign were published by MARGETIĆ and MARGETIĆ 2007. An as of Claudius found 'in the vicinity of the Požega valley villages of Treštanovci and Radovanci (near Velika)' (MARGETIĆ and MARGETIĆ 2003: 66; SOKAČ-ŠTIMAC 2005b: 8) does not suggest the possibility of an even earlier Roman presence in this area, since it could have been in circulation for a long period, at least judging by its wear (for the coin see MARGETIĆ and MARGETIĆ 2003: 68, cat. no. 1).

<sup>29</sup> SOKAČ-ŠTIMAC 2005b: 9.

<sup>30</sup> VEJVODA and ŠTIMAC (=ŠMIC) 1977: 91; BOJANOVSKI 1993: 62–63; MINICHREITER 1989: 187 (not on Tabula Peutingeriana!); SOKAČ-ŠTIMAC 2005b: 2; POTREBICA 2006: 45; HERMAN KAURIĆ 2004: 24; GRAČANIN 2010: 34–35, 2011: 33 (with some reservations). Cf. PINTEROVIĆ 1973–1975: 124 who locates Incerum 'at Požega'.

<sup>31</sup> KOS and ŠAŠEL KOS 2000: 292.

<sup>32</sup> For the Itinerary see BUNBURY 1883: ii.694–696; TOZER 1897: 306–308; KUBITSCHKEK 1916: 2323.29–2352.20.

**Karta 3:** položaj Inceruma na 20. karti Barringtonovog atlasa antičkog svijeta<sup>36</sup>

**Map 3:** the position of Incerum on the map 20 of the *Barrington Atlas of the Greek and Roman World*<sup>36</sup>

Cibala<sup>33</sup> te Aquae Balissae – Mursa.<sup>34,35</sup> Glede toga grada ne postoje nikakvi drugi podaci – na primjer nije zastupljen na Tabuli Peutingerijani, a ne spominje se ni u jednom drugom sačuvanom rimskom itineraru (Itinerarij iz Bordeauxa ili Jeruzalemski itinerarij, Ravenatska Kozmografija) – te se čini da bi bilo zasada arheološki i povijesno neutemeljeno nalazište na Treštanovačkoj gradini identificirati s Incerumom. S druge strane buduća arheološka istraživanja mogla konkretizirati tu identifikaciju.

– Sirmium (via Cibalae)<sup>33</sup> and Aquae Balissae – Mursa<sup>34</sup> roads.<sup>35</sup> There are absolutely no other information regarding this town – it is not represented on the Tabula Peutingeriana, for instance, neither is it mentioned in various other preserved Roman itineraries (the Bordeaux or Jerusalem itinerary, the *Ravenna Cosmography*) – and it seems unsubstantiated at the present time to identify the site of Treštanovci hill fort with it. On the other hand, future archaeological excavations might substantiate this identification, which certainly would not represent a surprising turn of events.

## Skupni nalaz kasnorimskog novca iz Treštanovaca (1938.)

### Zahvale

Pisac želi zahvaliti kustosima Odjela za numizmatiku Arheološkoga muzeja u Zagrebu, Ivanu Mirniku i Tomislavu Biliću, na dozvoli za proučavanje ostave, na stalnoj pomoći glede literature i na vrijednim savjetima tijekom pripremanja ovog rukopisa. Također zahvaljujem Josipu Mikšiku, pročelniku Područnog ureda za katastar Požega, Državna geodetska uprava, na pomoći pri određivanju točnog mjesta nalaza na temelju geodetskih podataka iz 1938. godine.

### Uvod

Najvažnije antičko arheološko nalazište u Požeškoj dolini leži nedaleko sela Treštanovci u Požeško-slavonskoj županiji. Pretpostavljalo se da je tu postojao rimski grad Incerum, smješten na križanju cesta koje su vodile od Siscije (Sisak) k Mursi (Osijek) te od Akve Balise (Darugar) do Cibala (Vinkovci) (o samome lokalitetu vidi prethodno poglavlje iz pera T. Bilića). Na tom arheološkom nalazištu nađeno je mnogo rimskog novca od 2. do 4. st., veći dio pripada Kasnom Carstvu.<sup>1</sup> Najčešći je bio novac Konstanta, Konstancija II i Valenta (SOKAČ-ŠTIMAC 1999: 6). Najranije izvješće o nalazima novca iz Treštanovaca potječe od Pillera i Mitterpachera iz 18. st. (PILLER – MITTERPACHER 1783: 76). Prva arheološka iskopavanja vršio je vlastelin i amater arheolog Milan Turković 1898. god. te je, među ostalim materijalom, našao i tri bakrena novca (TURKOVIĆ 1898: 242; BRUNŠMID 1898: 204). Muzej Požeške kotline obavljao je od 1972. god. sustavna arheološka iskopavanja na tom nalazištu, pri čemu je otkriven bogati numizmatički materijal (MARGETIĆ – MARGETIĆ 2007: 37).

## Hoard of Late Roman bronzes from Treštanovci (1938)

### Acknowledgments

The author wishes to thank the curators of the Numismatic department of the Archaeological museum in Zagreb, I. Mirnik, and T. Bilić for permission to analyze the hoard, for their continuous help with the references and valuable advices during the preparation of this manuscript, as well as J. Mikšik, the head of the Regional cadastral office Požega, State geodetic administration of Republic of Croatia, for his help in locating the exact finding spot of the hoard in geodetic records from 1938.

### Introduction

The most important Roman archaeological site in the Požega valley is situated near the village of Treštanovci in the Požeško-Slavonska županija (county). It is assumed that the Roman town of Incerum was situated here, positioned on the intersection of the roads leading from Siscia (Sisak) to Mursa (Osijek) and from Aquae Balissae (Darugar) to Cibalae (Vinkovci) (on the site itself see the preceding chapter of this book written by T. Bilić). At this archaeological site, many Roman coins from the 2<sup>nd</sup>–4<sup>th</sup> century were found, and majority belongs to the Late Empire.<sup>1</sup> The most frequent coins were that of Constans, Constantius II and Valens (SOKAČ-ŠTIMAC 1999: 6). The earliest account on the coin finds from Treštanovci by Piller and Mitterpacher is from the 18<sup>th</sup> century (PILLER – MITTERPACHER 1783: 76). The first archaeological excavations were carried out by the landowner and an amateur archaeologist Milan Turković in 1898, when he found, among other things, three copper coins (TURKOVIĆ 1898: 242; BRUNŠMID 1898: 204). The City museum of Požega has carried out from 1972 onwards systematic archaeological excavations on the site, discovering rich numismatic material in the process (MARGETIĆ – MARGETIĆ 2007: 37).

## Okolnosti nalaza

Ostava je iskopana za vrijeme oranja nekog vinograda u Treštanovcima dana 11. veljače 1938. god. Ubrzo nakon toga, dana 28. veljače 1938. god. ravnatelj Požeške gimnazije izvjestio je u svom pismu upućenom Arheološkome muzeju u Zagrebu da je nekoliko dana prije toga na nekom polju nedaleko Požege otkriveno šest malih glinenih posuda punih rimskog brončanog novca, a u svakoj od njih da je bilo približno 1000 primjeraka, kao i tri srebrnika (MARKOVIĆ 1938),<sup>2</sup> skupa s bakrenom narukvicom, ključem, srebrnim prstenom i jednim utegom. Neki seljaci su posude razbili i ulomke pogubili. Osam primjeraka novca poslano je u Zagreb skupa s pismom. Ravnatelj Arheološkog muzeja u Zagrebu V. Hoffiller odmah je reagirao, dajući upute predstavnicima Savske banovine u Zagrebu pismeno i telefonom. Dana 4. svibnja 1938. primio je potanko izvješće sreskog načelnika. Nalaznik je bio Nikola Karan iz Treštanovaca, koji je smjesta pokazao glinenu posudu s novcem, govoreći da je od sveukupno 6000 komada novca mnoge razdijelio tamošnjoj djeci i prodao približno 300 komada. Nalaznik je izjavio da je ostava nađena unutar ostatka rimske arhitekture. Zagrebački muzej je skupa s pismenim izvješćem primio paket sa 19 primjeraka novca, srebrnim prstenom i nekoliko tesera od mozaika. Ubrzo nakon toga J. Klemenc, kustos Arheološkog muzeja u Zagrebu stigao je u Treštanovce. Njegov potanki izvještaj o tom putovanju čuva se u muzejskom arhivu (KLEMENC 1938; vidi također prethodno poglavlje ove knjige, autora T. Bilića). Stigao je u Požegu 15. ožujka 1938. god., a sljedećeg je dana stupio u doticaj s gimnazijskim ravnateljem P. N. Rogićem i sreskim načelnikom Rukavinom, koji su mu dali dodatne podatke o nalazu. Nakon toga je J. Klemenc posjetio mjesnog paroha u Treštanovcima, Đorđa Jovanovića, čija žena, učiteljica mu je predala nekoliko komada novca, koje je skupila od đaka. Klemenc je među seljanima i tamošnjom djecom sabrao novca koliko god je mogao te je potom obišao nalazište. Lokalitet je poznat kao Gradina, gdje se nalazio pašnjak. Zemljoradnja na tom terenu nije bila intenzivna, budući da je tlo bilo siromašno zbog postojanja podzemnih tragova grada. To nije bio prvi nalaz novca na istome mjestu. Dvije godine prethodno, 1936. nađena je na zemljištu Milana Miroslava jedna posuda puna novca. Druga ostava otkrivena je tijekom oranja na zemljištu Nikole Karana, kad je pronašao zeleno glaziranu glinenu posudu punu brončanog novca. Kasnije, na sredini polja, otkriveno je još pet posuda, gotovo sve s poklopcima, a uokolo su se nalazili ulomci žbuke, kamena, opeka, mozaika i crepova. Od nalaza iz 1936. god. približno 20 komada novca čuva se u Zagrebu, s dodatnih 1846 primjeraka iz ostave iskopane 1938. god. Sudbina zanimljive glinene posude ostaje nepoznata. Do danas je ta ostava objelodanjena samo sumarno,<sup>3</sup> dok je detaljna analiza predočena na ovome mjestu.

<sup>2</sup> Jedan primjerak novca određen je prema Robert Ball Nachf., Wien, Versteigerung Katalog 6 (1932), br. 2355 = Konstancije II, VOT XX MVLT XXX, Kat. br. 1125–1199 (MARKOVIĆ 1938).

## Circumstances of the find

The hoard was discovered during the ploughing of a vineyard in the village of Treštanovci on the 11<sup>th</sup> February, 1938. Soon afterwards, on the 28<sup>th</sup> February, 1938 the principal of the Požega gymnasium reported in his letter the Archaeological museum in Zagreb that several days earlier on a field in the vicinity of Požega six small clay pots full of Roman bronze coins were found, each containing approximately 1000 pieces, with three silver coins (MARKOVIĆ 1938),<sup>2</sup> together with a copper bracelet, a key, a silver ring and one weight. The pots were smashed by some peasants and their fragments were subsequently lost. Together with the letter, eight coins were sent to Zagreb. The director of the Archaeological museum in Zagreb, V. Hoffiller acted promptly, advising the authorities of the Savska banovina (county) in Zagreb both in a letter and by a telephone. On the 4<sup>th</sup> May, 1938 he received a detailed report from the district prefect. The finder was Nikola Karan from Treštanovci, who immediately showed the clay pot with coins, saying that out of the total of 6000 coins he gave many to local children, and sold about 300 pieces. The finder stated that the hoard was found inside the remains of a Roman building. Together with the written report, the Zagreb museum also received a parcel containing 19 coins, a silver ring and several pieces of mosaics. Soon after J. Klemenc, a curator at the Archaeological museum in Zagreb arrived in Treštanovci. In the Museum archives a detailed report of his travel is kept (KLEMENC 1938; see also the preceding chapter of this book written by T. Bilić). He arrived to Požega on 15<sup>th</sup> March 1938, and on the next day contacted the gymnasium director P. N. Rogić and municipal head Rukavina, from whom he received some additional information about the find. Afterwards Klemenc visited the local priest in Treštanovci, Đorđe Jovanović, whose wife, a school teacher, gave him several coins which she collected from the school children. Klemenc has collected as many coins as he could from the villagers and local children and then visited the find spot. The finding place was the site known as Gradina, where a grazing field was located. The agricultural work on this terrain was not extensive, since the soil was poor due to the presence of the underground town remains. This is not the first hoard found here. Two years earlier in 1936 one pot with coins was found on the land belonging to one Milan Miroslav. The second find in 1938 was discovered during the ploughing on the property of one Nikola Karan, when he found a green glazed clay pot full of bronze coins. Later, in the middle of field five more pots were found, mostly covered with lids, whereas scattered broken remains of mortar, rocks, bricks, mosaics and roof tiles laid nearby. Therefore, ca. 20 coins from the 1936 Treštanovci hoard are kept in Zagreb, with additional 1846 specimens from the 1938 find. The fate of the interesting clay pot is unknown. So far, this hoard was only summarily published,<sup>3</sup> while a full report and analysis is presented here.

<sup>2</sup> One of the silver coins was identified as Robert Ball Nachf., Wien, Versteigerung Katalog 6 (1931), No. 2355 = Constantius II, VOT XX MVLT XXX, cat. no. 1125–1199 (MARKOVIĆ 1938).

## Sastav ostave

Sastav ostave, analiziran prema vladarima i kovnicama predložen je na Tablici 1. Samo 11 novaca starije je od 330. god.: 5 reduciranih folisa Konstantina I. iz Rima, Ticina, Aquileje i Siscije, datiranih u 312.–313. god., 4 AE3 Konstantina (2 iz Constantinopola iskovana 326.–330. god., kao i po jedan komad novca iz Siscije i Arelata). K tomu, 2 AE3 Konstancija II. kao cezara iz Siscije i Kizika datiraju se u 324.–330. god. Ostava iz Treštanovaca morala je biti skrivena nakon 28. rujna 351. god. (tj. poslije bitke kod Murse u kojoj su snage cara Konstancija II. nadvladale postrojbe uzurpatora Magnencija), budući da najzadnji kovovi spadaju u razdoblje između 28. rujna 351. i 6. studenoga 355. god.<sup>4</sup> Na primjer, novac cezara Konstancija Gala, kat. br. 1745 iz siscijske kovnice (LRBC br. 1199) datira se između 351. i 354. god.<sup>5</sup> Određeni broj kovova iz Siscije, kao i iz nekih drugih kovnica (Sirmij, Tesalonika, Herakleja, Konstantinopol i Nikomedija) datira se u to razdoblje te čvrsto potvrđuje terminus post quem ostave u 351. god. Određeni broj kovova iz Siscije, kao i iz nekih drugih kovnica (Sirmij, Tesalonika, Herakleja, Konstantinopol i Nikomedija) datira se u to razdoblje te čvrsto potvrđuje terminus post quem ostave u 351. god.

Najveći dio novca pripada Konstantu (40,6%), Konstanciju II. (32,6%), Konstantinu I. (8,2%) te Konstantinu II. (5,1%) (Slika

Slika 1. / Figure 1.

<sup>4</sup> Rezent datira ostavu u vrijeme koje je prethodilo bitki, odnosno smatra da je nastala pod utjecajem kretanja Magnencijeve vojske koja je u kolovozu 351. zauzela Sisciju: Odakle se posavinskom magistralom upravlja prema Sirmiju, da bi kod Marsonije skrenula na sjever prema Certisiji. Budući da je Magnenciju glavni cilj bila Mursa, a želio je izbjeći Konstancijev položaj kod Cibala, čini se da se upravo na zapad prometnicom koja je prolazila slavonskim sredogorjem i zatim prema podravskoj magistrali. To bi značilo da je prolazio i blizu današnjeg treštanovačkog lokaliteta, te je možda novac sakriven pred protucarevim nadiranjem. Ovoj rekonstrukciji ne proturječi ni datacija posljednjih kovova koji pripadaju Konstanciju Galu u 351.-354. godinu jer je on postao cesarom 15. ožujka 351. u Sirmiju. Decencije je pak cesar postao vjerojatno još u ljeto 350. godine (ili svakako do proljeća 351.), dok je Vetranton nosio carski naslov od ožujka do prosinca 350. godine. Ako bi se, dakle, htjela uže odrediti datacija posljednjih kovova, oni bi morali potjecati iz ožujka do rujna 351.

<sup>5</sup> = RIC 327, datiran od 28. rujna 351. do 6. studenoga 355. god.

## The composition of the hoard

The composition of the hoard analyzed by rulers and mints is given in Table 1. Only 11 coins predate 330: 5 reduced folles of Constantine I from Roma, Ticinum, Aquileia and Siscia, datable to 312–313, and 4 AE3 of Constantine (2 from Constantinople minted in 326–330 and a single coin of both Siscia and Arelate). In addition, 2 AE3 of Constantius II as Caesar from Siscia and Cyzicus are datable to 324–330. The Treštanovci hoard must have been concealed after 28 September 351 (that is, after the battle at Mursa in which the emperor Constantius II defeated the usurper Magnentius), since the latest issues belong to the period 28 Sept 351–6 Nov 355.<sup>4</sup> For instance, the coin of Constantius Gallus Caesar, cat. no. 1745 from the Siscia mint (LRBC no. 1199) is dated to 351–354.<sup>5</sup> A number of coins from Siscia, as well as those from other mints (Sirmium, Thessalonica, Heraclea, Constantinople and Nicomedia) is datable to this period, firmly fixing the *terminus post quem* of the hoard in 351.

The majority of coins belong to Constans (40,6%), Constantius II (32,6%), Constantine I (8,2%), and Constantine II (5,1%) (Figure 1). The other rulers are represented by a smaller number of specimens, with Crispus, Decentius and Hannibalianus represented by only 1–2 pieces.

The composition of Treštanovci hoard is compared to four other Pannonian bronze hoards which close within the period 7a (348–361) before 353: Vranić (1897) (BRUNŠMID 1902: 170), Sirmium (1894) (BRUNŠMID 1896: 82), Gaboš (1886) and Aljmaš (1903) (MIRNIK – DUKAT 1978: 15). The largest and the most important hoard from Vranić consisted of more than 20000 coins, which is one of the largest hoards ever to be found in Croatia. The analysis of 4885 specimens from this hoard gives its *terminus post quem* as 351, in the time of the civil war between Magnentius, Vetranton and Constantius. This hoard is of particular interest with regards to the Treštanovci hoard, since it is geographically nearest hoard, both being found in the Požega valley, within 30 km apart. The other similarity is that both hoards coins were concealed in clay pots. The comparison of the Treštanovci with the Vranić hoard reveals that a smaller number of rulers is present in Vranić, whereas in both hoards the coins of Constans dominate (Table 2). Interestingly, there is one piece of Theodora in Vranić hoard, the ruler which is not represented in the Treštanovci hoard. As one can see from Table 2, the differences can be observed in the proportion of Vetranton's and Magnentius' coins in the hoards. The Vranić hoard consists exclu-

<sup>4</sup> The anonymous reviewer dates the concealment of the hoard to a period antedating the battle and associates it with the movements of Magnentius' army that captured Siscia in August, 351. From there, the army went along the Sava towards Sirmium and turned north at Marsonia towards Certisia. Since Magnentius' main goal was Mursa and wanting to avoid Constantius at Cibalae, he seems to have turned towards West on the road passing through the Central Slavonian mountain range and next towards the road passing along the Drava. This would mean that he passed by the site of Treštanovci, and, perhaps, the coinage was concealed in association with the usurper's advancement. The dates of the latest issues of Constantius Gallus (351-354) are in agreement with this hypothesis, since he became a Caesar on March 15th, AD 351 in Sirmium. Decentius, on the other hand, became Caesar probably already in the summer of 350 (certainly before the Spring of 351), while Vetranton was emperor from March to December of 350. In this way, if one would wish to determine more precisely the dates of the latest issues, they must have been produced from March to September, 351.

<sup>5</sup> = RIC 327, dated from September 28<sup>th</sup>, 351 to November 6<sup>th</sup>, 355.

<sup>a</sup> C = Konstantin, Cp = Konstantinopol, UR = Urbs Roma, Cs = Konstancije, Cn = Konstant, Cr = Krisp, Delm = Delmacije, Han = Hanibalijan, Hel = Helena, M = Magnencije, V = Vetranton, Dec = Decencije, Gall = Konstancije Gal

<sup>a</sup> C = Constantine, Cp = Constantinopolis, UR = Urbs Roma, Cs = Constantius, Cn = Constans, Cr = Crispus, Delm = Delmatius, Han = Hannibalian, Hel = Helena, M = Magnentius, V = Vetranton, Dec = Decentius, Gall = Constantius Gallus

1). Ostali vladari zastupljeni su manjim brojem primjeraka, s Krispom, Decencijem i Hanibalijanom zastupljenima s po svega 1–2 komada.

Sastav ostave iz Treštanovaca je uspoređen sa četiri panonske ostave koje završavaju unutar razdoblja 7a (348.–361.), prije 353. god.: Vranić (1897) (BRUNŠMID 1902: 170), Sirmium (1894) (BRUNŠMID 1896: 82), Gaboš (1886) i Aljmaš (1903) (MIRNIK – DUKAT 1978: 15). Najveća i najvažnija ostava iz Vranića sastojala se od više od 20.000 novaca te je to jedan od najvećih skupnih nalaza u Hrvatskoj uopće. Analiza 4885 primjeraka iz tog skupnog nalaza daje kao *terminus post quem* 351. god., vrijeme građanskog rata između Magnencija, Vetrantija i Konstancija. Ta je ostava od posebnog interesa glede ostave iz Treštanovaca, budući da je to geografski najbliži skupni nalaz; i jedan i drugi otkriven je u Požeškoj kotlini, unutar 30 km udaljenosti. Druga sličnost obje ostave je ta da su bile skrivene u glinenim loncima. Usporedba treštanovačke i vranjičke ostave otkriva da je u ostavi iz Vranića zastupljen manji broj vladara, ali u obje ostave prevladava novac Konstancija (Tablica 2). Zanimljiva je prisutnost jednog novca Teodore u ostavi iz Vranića, koja nije zastupljena u ostavi iz Treštanovaca. Veće razlike među ostavama u Tablici 2 nalazimo u zastupljenosti Vetrantiona i Magnencija. Skupni nalaz iz Vranića sadrži samo novac Vetrantiona (dok nema Magnencija), a u onima iz Treštanovaca i Gaboša postoje i kovovi Vetrantiona i Magnencija. Obojica tih samozvanih vladara zastupljeni su u još jednoj panonskoj ostavi, zakopanoj 351. god., nađenoj u

sivoj Vetrantion's coins, while there are no Magnentius' issues; the Treštanovci and Gaboš hoards contain both Vetrantion's and Magnentius' issues. These two self-proclaimed rulers are present in another Pannonian hoard concealed in 351, found at Aljmaš. While the coins of Vetrantion are almost the only type of coins in the Vranić

**Tablica 2.** Glavni vladari u panonskim ostavama, zakopanima 351. god.

Aljmašu. Dok je novac Vetraniona gotovo jedina vrsta novca u ostavama iz Vranića i Aljmaša, u skupnim nalazima iz Treštanovaca i Gaboša, odnos novca Vetraniona i Magnencija je gotovo isti, t. j. 2:1. Konačno, ostava iz Sirmija ne sadrži niti novac Vetraniona niti Magnencija.<sup>6</sup>

## Analiza prema kovnicama

Novac je raspoređen prema kovnicama i razdobljima, prema Duncanu<sup>7</sup> i prikazan na Tablici 3 i Sl. 2. Samo mali broj konstantinovskog novca spada u ranija razdoblja 2–4 (11 primjeraka), dok najveći broj primjeraka pripada razdoblju 6 (692 komada). Kao što bi se i moglo očekivati, zemljopisna blizina

and Aljmaš hoards, in the Treštanovci and Gaboš hoards the proportion of the Vetranio and Magnentius coins is almost equal, i.e. 2:1. Finally, the Sirmium hoard does not contain either Vetranio's or Magnentius' coins.<sup>6</sup>

## Mint distribution

Coins were organized by mints and in periods according to Duncan<sup>7</sup> and displayed in Table 3 and Figure 2. Only a small number of the Constantinian specimens belong to the earlier periods 2–4 (11 specimens), while the largest number of specimens belongs to period 6 (692 pieces). As one might expect, due to the geographical

<sup>6</sup> Napomena recenzenta: Sirmijska ostava nije sadržavala Magnencijev novac budući da uzurpator nije uspio zavladatai ovim područjem nego je bilo u Konstancijevoj vlasti. Nadalje, iz činjenice da su gaboška i vranićka ostava sadržavale novac i Konstancija Gala i Magnencija, dok je aljmaška imala Magnencijev novac, iako ne i Konstancija Gala, uz to što u njoj po brojnosti preteže Vetranionov novac, recenzent dolazi do zaključka da su i ove ostave zakopane u isto vrijeme kad i treštanovačka, iako su aljmaška i gaboška možda nastale pod utjecajem kretanja Konstancijeve vojske.

<sup>7</sup> Razdoblje 5 sve do prestanka reversa s GLORIA EXERCITVS, podijeljeno na podrazdoblja: 5a (330.–336. god.) i 5b (336.–341. god.), smanjenje težine označeno promjenom na revers s prikazom jedne zastave; 6 (341.–348. god.) tipovi reversa VICTORIAE DD AVGG Q NN, VOT XX MVLT XXX. i drugi tipovi preuzimanja novca slabijeg metala do uvođenja tipova FEL TEMP REPARATIO; 7 (348.–361. god.) od uvođenja tipova FEL TEMP REPARATIO sve do početka kovanja Julijana kao augusta, s podrazdobljima: redukcija novca s 'konjanikom koji pada' na reversu do AE3 standarda, 7a (348.–353. god.).

<sup>6</sup> The reviewer's remark: The Sirmium hoard did not contain any Magnentius' issues because he was unable to conquer this region, which was controlled by Constantius. Furthermore, since both the Gaboš and Vranić hoards contained both Constantius Gallus' and Magnentius' coinage, while the Aljmaš hoard contained Magnentius', but not Constantius Gallus' coinage, and since Vetranio's issues are dominant in this hoard, the reviewer believes that they were concealed contemporaneously with the Treštanovci hoard, although the concealment of the Aljmaš and Gaboš hoards can be rather associated with the movements of the army of Constantius.

<sup>7</sup> Period 5 to the cessation of GLORIA EXERCITVS reverse, subdivided into: 5a (330–336) and 5b (336–341), weight reduction marked by change to 'one standard' reverse; 6 (341–348) reverse types VICTORIAE DD AVGG Q NN, VOT XX MVLT XXX and the other types from the resumption of base metal coinage to the introduction of FEL TEMP REPARATIO types; 7 (348–361) from the introduction of FEL TEMP REPARATIO types to the commencement of minting for Julian as Augustus, subdivided: reduction of coins with 'falling horseman' reverse to AE3 standard, 7a (348–353).

Slika 2. / Figure 2.

Siscije uvjetovala je najveću brojnost novca iz te kovnice (632 primjerka). Novac iz Tesalonike (244 primjeraka) je drugi po redu, a onaj iz konstantinopolske kovnice je treća najveća skupina (151 primjerak). Druge kovnice zastupljene su znatno manjim brojem komada.

Usporedba kovnica učinjena je sa četiri ostale panonske ostave, koje se uglavnom sastoje od novca iz razdoblja 5–7a, za koje postoje potanki podaci: Vranić, Sirmij, Vukovar (LUKIĆ 1984: 201) i Boljetin (VASIĆ 1978: 133) (Tablica 4). Ostala razdoblja nazočna u tim ostavama nisu uzeta u obzir zbog malog broja primjeraka. Kovnice su razvrstane u sljedeće skupine: Galija (Trier, Lugdunum, Arelate); Italija (Ticinum, Rim, Akvileja); Panonija (Siscija, Sirmij); Istok/Propontida (Tesalonika, Herakleja, Konstantinopol, Nikomedija, Kizik); kao i Daleki istok (Antiokija, Aleksandrija) (DUNCAN 1993).

Usporedba podjele novca unutar ostava prema kovnicama prikazana je na Tablici 4 (Slika 3) otkriva da sirmijska ostava uvelike slični sastavu ostave iz Treštanovaca, dok se one iz Vranića, Vukovara i Boljetina bitno razlikuju. Sirmijska ostava je neobična jer se uglavnom sastoji od novca iz 343.–348. god., a sastav prema kovnicama (56,9 % iz istočnih kovnica, 24,3 % iz Tesalonike i 20,8% iz Siscije) neobičan je za jedan panonski skupni nalaz. Zanimljiva je činjenica da Siscija postaje najbrojnije zastupljena kovnica u posljednjem razdoblju sirmijske ostave. Ostava iz Vukovara sadrži kovove FEL TEMP REPARATIO iz panonskih kovnica. U Vukovaru je neobično da kovnice Sirmija ima više od Siscije. Ostava iz Boljetina (u Meziji II.) pokriva široki kronološki raspon (razdoblja 2–7b), ali se najviše

Tablica 4. Podjela ostava, koje se uglavnom sastoje od novca iz razdoblja 5–7a, prema kovnicama.

Table 4. Mint distribution in hoards consisting chiefly of periods 5–7a

Kovnice / Mints	Treštanovci	Vranić	Sirmium	Vukovar	Boljetin
Galija / Gaul	1,8		0,9	–	0,8
Italija / Italy	8,9	0,2	12,3	3,8	5,7

Dal. istok / Far East	7,3	5,1	0,1	9,1	2,9

Razdoblja 5–7a / Periods 5–7a

Slika 3. / Figure 3.

proximity of Siscia, the coins from this mint are the most abundant (632 specimens). The coins from Thessalonica (244 specimens) make the second, and mint of Constantinople the third largest group (151 coins). Other mints are represented with significantly smaller number of pieces.

The comparison of mints was made with four other Pannonian hoards consisting predominantly of periods 5–7a coins, for which detailed information is available: Vranić, Sirmium, Vukovar (LUKIĆ 1984: 201) and Boljetin (VASIĆ 1978: 133) (Table 4). The other periods present in these hoards were not used in statistical analysis due to a small number of specimens. Mints were assembled in the following groups: Gaul (Treveri, Lugdunum, Arelate); Italy (Ticinum, Rome, Aquileia); Pannonia (Siscia, Sirmium); East/Propontis (Thessalonica, Heraclea, Constantinople, Nicomedia, Cyzicus); and Far East (Antioch, Alexandria) (DUNCAN 1993).

The comparison of the mint distribution in hoards tabulated in Table 4 (Figure 3) reveals that the Sirmium hoard closely resembles composition of Treštanovci hoard, while Vranić, Vukovar and Boljetin significantly differ. The Sirmium hoard is unusual in consisting chiefly of coins from 343–348 and the mint distribution (56.9 % from the Eastern mints, 24.3 % from Thessalonica and 20.8% from Siscia) is odd for a Pannonian find. An interesting point is that Siscia becomes the most frequent mint in the final period of Sirmium hoard. The Vukovar hoard contains FEL TEMP REPARATIO issues from the Pannonian mints. Vukovar is unusual in that Sirmium mint outnumbers Siscia. The hoard of Boljetin (in Moesia II) covers a wide chronological span (periods 2–7b) but consists overwhelmingly of the earlier FEL TEMP REPARATIO issues (period 7a). Of the legible coins, 48% are from the Eastern mints against 23 % from Siscia and Sirmium and 20% from Thessalonica. The reason for possible deviation in the relative proportion of mints might be sought in the fact that some of the hoards consist of a very small number of types and issues, while others cover a wider chronological span. A striking similarity in the composition of the Treštanovci hoard was recognized when a comparison was made with the stray finds found in several Pannonian towns (881 specimens): Siscia, Mursa (Osijek), Cibalae (Vinkovci), Cornacum (Sotin), Teutoburgium (Dalj) and Sopianae (Pécs) (DUNCAN 1993, Figure 4). The numismatic material from selected Roman towns was assembled in this place, allowing us to form a clearer picture of coin circulation and relative mint distribution, which might represent the pitfalls in the comparison of the hoards composed of a small number of types and issues with larger hoards spanning over wide range of periods.

sastoji od ranijih kovova FEL TEMP REPARATIO (razdoblje 7a). Među čitkim novcem 48% potječe iz istočnih kovnica prema, 23% iz Siscije i Sirmija te 20% iz Tesalonike. Uzrok tom mogućem odudaranju u relativnom odnosu kovnica mogao bi se potražiti u činjenici da se neke od ostava sastoje od vrlo malog broja tipova i emisija, a druge pak pokrivaju širi kronološki raspon. Velika sličnost sastava treštanovačkog skupnog nalaza mogla se prepoznati prigodom usporedbe između pojedinačnih nalaza iz nekolicine panonskih gradova (881 primjeraka): Siscije, Murse (Osijeka), Cibala (Vinkovaca), Kornaka (Sotina), Teutoburgija (Dalja) i Sopijane (Pečuha) (DUNCAN 1993, Slika 4). Tu je skupljen numizmatički materijal iz odabranih rimskih gradova, omogućivši nam stvoriti jasniju sliku optjecaja novca i relativne raspodjele po kovnicama. To bi mogla biti i pogreška u usporedbi s ostavama, koje se sastoje od malog broja tipova i emisija, s većim ostavama, koje imaju veći vremenski raspon.

Tipovi na reversima, koji se sastoje od malog broja primjeraka (manje od 10), izostavljeni su iz analize (Tablica 5). Tri tipa: GLORIA EXERCITVS (1 zastava), VICTORIAE DD AVGG Q NN i FEL TEMP REPARATIO (padajući konjanik) zastupaju veći dio primjeraka, ostali su tipovi mnogo rjeđi. Analiza primjeraka iz siscijske kovnice otkrivaju da su tipovi GLORIA EXERCITVS (1 zastava), VICTORIAE DD AVGG Q NN i FEL TEMP REPARATIO (galija) najbrojniji, s tipom FEL TEMP REPARATIO (padajući konjanik) koji slijedi kao drugi.

Slika 4. / Figure 4.

Reverse types consisting of a small number of specimens (less than 10) were omitted from analysis (Table 5). Three types: GLORIA EXERCITVS (1 standard), VICTORIAE DD AVGG Q NN and FEL TEMP REPARATIO (Falling Horseman) represent the majority of specimens, while all other types are much less frequent. The analysis of specimens from Siscia mint revealed that GLORIA EXERCITVS (1 standard), VICTORIAE DD AVGG Q NN and FEL TEMP REPARATIO (Galley) are the most numerous, with the FEL TEMP REPARATIO (Falling Horseman) type following as second.

## Metrologija

Težine AE3 novca iz Treštanovaca za razdoblja 5a–7a prikazani su na Slici 5, što pokazuje da je najveći broj novca iz skupine težine od 1,51 do 1,75 g.

## Metrology

The weights of the Treštanovci AE3 coins for the periods 5a–7a are displayed in Figure 5, showing that the largest number of coins is from the 1,51–1,75 g group.

Slika 5. / Figure 5.

Za prosječne težine novca iz siscijske kovnice i ostalih kovnica sa statistički značajnim brojem primjeraka (više od 50) za 336.–353. god. (razdoblja 5b–7a), izračunan je raspon (najniže–najviše težine), kao i najjača raspodjela prikazani su na tablici 6. Za veći dio razdoblja je veličina uzorka bila premala za kovnice osim za siscijsku, a da pruže statistički značajne prosječne težine. Prosječna težina bila je u siscijskoj kovnici između 336.–341. god. (razdoblje 5b) 1,68 g, s vrhuncem od 1,51 do 1,75 g. Kod drugih kovnica mogu se naći velike razlike za razdoblja 5b i 6. Kod Konstantinopola je prosječna težina za razdoblje 5b bila 1,52 g, slično onoj od 1,57 g kod Kizika, s mnogo višom prosječnom težinom od 1,71 g u Tesalonici. Novac AE3 iz Siscije pokazuje ujednačenost u razdobljima 5b–7a: prosječne težine bile su 1,68, 1,67 i 1,69 g, što se može usporediti s vrijednostima za Tesaloniku u razdobljima 5b i 6. Prosječne vrijednosti za siscijski AE3 podudaraju se s onima, koje je J.P.C. Kent ustanovio u RIC VIII za razdoblje 337.–348.

The average weights of the coins from the mint of Siscia and from other mints with statistically significant number of specimens (more than 50) for the years 336–353 (periods 5b–7a), span (lowest–highest weights) and the peak distribution have been calculated and are displayed in Table 6. For most of the periods the sample size was too small for mints other than Siscia to provide statistically significant average weights. The average weight at Siscia from 336–341 (period 5b) was 1,68 g and the peak was at 1,51–1,75 g. One may find large differences at other mints in periods 5b and 6. At Constantinople the average weight in period 5b was 1,52 g, similar to 1,57 g at Cyzicus, with a much larger average weight of 1.71 g in Thessalonica. AE3 coins from the mint of Siscia show uniformity in periods 5b–7a: average weights were 1,68, 1,67 and 1,69 g, respectively, which are comparable to Thessalonica values in periods 5b and 6. Siscian AE3 average values are compatible with those established by Kent in RIC VIII for period 337–348: 1.61–1.67 g, with an average deviation of 12–14% from the standard (theoretical weight of 1.87 g, standard of 173 to the pound). It is also evident that great care was taken at Siscia mint to follow the standard of 60 to the pound in minting small AE2 issues during the period 7a (348–353). The average weight was 4,48 g, which is identical to theoretical value (4,48 g, standard of 72 to the pound) given by Kent for small AE2. Since Roman bronze coins were struck *al marco* (GRIERSON – MAYS 1992: 30) (that is, so many pieces being struck to the Roman pound without any attempt at control of the weights of individual coins), there is often a considerable variation of weight both above and below the standard (KING 1980: 48; KING 1981:38). However, in small AE2 issues of Siscia in 348–353 period, precision was astonishingly strictly followed.

The die axis pattern of coins in the Treštanovci hoard is also of some interest. The importance of the die axis pattern lies in the extent to which it can be shown to have differed significantly between mints or at the same mint at a different period of time. Differences in pattern between mints suggest that individual mints may have developed their own technique of aligning blanks and dies. Most

god.: 1,61–1,67 g, s prosječnim odudaranjem od 12 do 14 % od standarda (teoretska težina od 1,87 g, standard od 173 komada po funti). Također je razvidno da su se u siscijanskoj kovnici posebno brinuli da slijede standard od 60 komada na funtu kod kovanja malih kovova AE2 emisija tijekom razdoblja 7a (348.–353. god.). Prosječna težina bila je 4,48 g, što je isto vjetno s teoretskom vrijednosti (4,48 g, standard od 72 na funtu), koju je dao J.P.C. Kent za sitne AE2. Budući da je rimski brončani novac kovan *al marco* (GRIERSON – MAYS 1992: 30) (to jest, toliko je komada kovano od jedne rimske funte, bez ikakvog pokušaja da se kontroliraju težine pojedinačnih novaca), tu često dolazi do značajnih variranja u težini i iznad i ispod standarda (KING 1980: 48; KING 1981:38). Ipak, kod emisija malih AE2 kovova u Sisciji u razdoblju 348.–353. god., na iznenađujući su se način strogo držali točnosti.

Schema položaja osi na novcu također je od određenog interesa za skupni nalaz iz Treštanovaca. Važnost uzorka položaja

coins have ↑ or ↓ axis, the remainder are ↖ and ↘ or fairly nearly so (Table 7). The dominant axis pattern is evenly distributed between ↑ and ↓ axis.

Considering that ↖ and ↗ die axis are merely slight deviations from perfectly aligned ↑ dies, and accordingly the ↙ and ↘ die axis are deviations from ↓ axis, they can also be assembled in two groups, ↑ and ↓. Figure 6 shows that in period 5a the ↑ die axis dominates (by almost 15%), while in the periods 5b–7a, either of dies dominate, but with relative dominance smaller than 10%.

The die axis pattern of coins from particular mints is also of some interest. A reliable comparison between mints in the period 5b was allowed by the sufficient number of specimens available (Figure 7). A somewhat different picture could be obtained in comparison to the one displayed in Figure 6. Concerning the four dominant mints, in Siscia and Constantinople ↑ die axis are more frequent, while in Cyzicus and Thessalonica, the ↓ die axis dominates. While the ↑/↓

Slika 6. / Figure 6.

Slika 7. / Figure 7.

ja osi leži u mjeri u kojoj se može pokazati da se ona razlikovala između kovnica, ili u istoj kovnici, u različitom vremenskom odsječku. Razlike u uzorku između kovnica sugeriraju da su pojedine kovnice razvijale vlastitu tehniku postavljanja kovnih pločica i žigova. Većina novca ima os  $\uparrow$  ili  $\downarrow$ , a ostatak ima  $\wedge$  ili  $\vee$  ili približno tome (Tablica 7). Prevladavajuća shema osi je jednoliko raspodijeljena između  $\uparrow$  i  $\downarrow$  osi.

Ako pretpostavimo da su osi kalupa  $\wedge$  i  $\nearrow$  samo neznatna odudaranja od savršeno postavljenih kalupa  $\uparrow$ , i isto prema tome osi kalupa  $\vee$  i  $\searrow$  koje su odudaranja od osi  $\downarrow$ , i one se mogu ubrojiti u dvije skupine,  $\uparrow$  i  $\downarrow$ . Slika 6 pokazuje da u razdoblju 5a prevladava os kalupa  $\uparrow$  (s gotovo 15%), a u razdobljima 5b–7a, pojedine osi prevladavaju, ali s relativnom dominacijom manjom od 10%.

Također je zanimljiva shema osi žigova novca iz određene kovnice. Pouzdanu usporedbu između kovnica u razdoblju 5b dozvolio je dovoljan broj postojećih primjeraka (Slika 7). Ponešto različita slika mogla se dobiti u usporedbi s onom prikazanom na slici 6. Što se tiče četiri prevladavajuće kovnice, u Sisciji i Konstantinopolu os  $\uparrow$  je učestalija, a u Kiziku i Tesalonici prevladava os  $\downarrow$ . Dok razlika osi  $\uparrow/\downarrow$  gotovo i ne postoji u kovnici Sisciji ( $\uparrow$  i  $\downarrow$  jednoliko su raspoređene), te su razlike za druge kovnice značajne (16–21%).

Podjela novca prema oznakama oficina u Sisciji daje zaključiti da je kovnica gotovo slično djelovala u razdobljima 5b–7a (Tablica 8). U razdobljima 5b–7a prevladava novac iskovan u oficini A (c. 33–45%). Približno isti broj novca izdavan je u officinama B,  $\Gamma$  i E. Postoji tendencija da se officina  $\Delta$  pojavljuje na najmanjem broju novca, čineći ca. 3–15%.

Siscijska kovnica kovala je standardne tipove naličja u različitim odnosima. Prevladava tip VICTORIAE DD AVGG Q NN, a proizvodnja za GLORIA EXERCITVS (1 zastava), FEL TEMP REPARATIO (Feniks), FEL TEMP REPARATIO (galija) and FEL TEMP REPARATIO (padajući konjanik) (Tablica 9) bila je gotovo ista. Podjela novca prema oznakama za oficine i tipove u Sisciji slijedi pravilo prikazano na Slici 8. Jedino značajno odudaranje je vrlo mali broj primjeraka tipa FEL TEMP REPARATIO (padajući konjanik) iskovanih u oficini E (Slika 9).

## Posebno zanimljivi primjerci

Nešto više pažnje zaslužuju neki rijetki primjerci ili varijante koje očitno nisu zabilježene u LRBC i RIC. Primjerice, moramo spomenuti dva rijetka kova Hanibalijana iz Konstantinopola

Tablica 8. Podjela na oficine, kovnica Siscia

Table 8. The officina distribution, Siscia mint

Razdoblje / Period	5b		6		7a	
	No.	%	No.	%	No.	%
A	34	44,7	103	37,1	77	33,0
B	11	14,5	43	15,5	42	18,0
$\Gamma$	13	17,1	45	16,2	57	24,5
$\Delta$	3	3,9	42	15,1	18	7,7
E	15	19,7	45	16,2	39	16,7
Ukupno / Total	76		278		233	

difference is almost nonexistent at the Siscia mint ( $\uparrow$  and  $\downarrow$  are evenly distributed), these differences are significant for other mints (16–21%).

The distribution of the coins by the officina marks at Siscia suggests that the mint functioned rather similarly in periods 5b–7a (Table 8). In periods 5b–7a the coins minted in officina A dominate (c. 33–45%). Approximately equal number of coins was issued at officinae B,  $\Gamma$  and E. There is a tendency that officina  $\Delta$  occurs on the smallest number of coins, comprising ca. 3–15%.

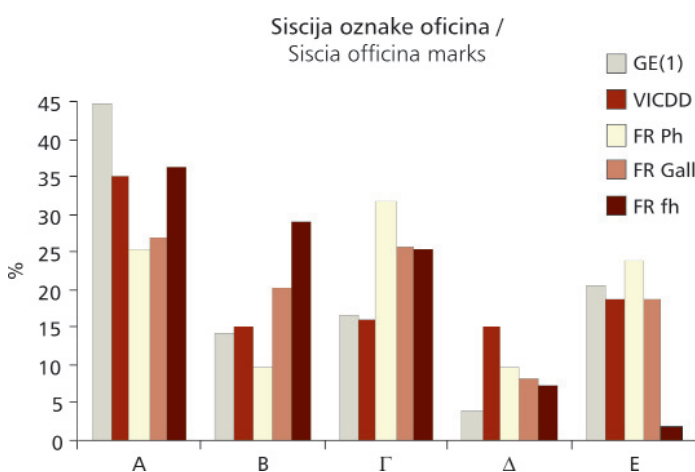

The Siscia mint struck the standard reverse types in different proportions. VICTORIAE DD AVGG Q NN type predominates, while the output was more or less equal for GLORIA EXERCITVS (1 standard), FEL TEMP REPARATIO (Phoenix), FEL TEMP REPARATIO (Galley) and FEL TEMP REPARATIO (Falling Horseman) (Table 9). The distribution of the coins broken down to officina marks and types at Siscia follows the generality displayed in Figure 8. The only significant deviation is the very small number of the FEL TEMP REPARATIO (Falling Horseman) type minted in officina E (Figure 9).

## The specimens of special interest

Some rare specimens, or varieties apparently unrecorded by LRBC and RIC deserve more attention. For example, two rare specimens of Hannibalian from Constantinople (LRBC 1034, cat. nos. 369 and 370) and single piece of Decentius (LRBC 910, cat. no. 1738) (MARGETIĆ – MARGETIĆ 2008b: 39) should be mentioned.

(LRBC 1034, kat. br. 369 i 370) i jedini primjerak Decencija (LRBC 910, kat. br. 1738) (MARGETIĆ – MARGETIĆ 2008b: 39).

Nadalje, mogli bismo spomenuti i kat. br. 195, Constantinopolis s Pax koja stoji naličju i drži grančicu i poprečno žezlo (Rim, LRBC 611, RIC 105 stupanj rijetкости R4). Jedan drugi rijetki primjerak nalazi se pod kat. br. 309, rijetko izdanje Konstancija II. kao cezara (324.–337.) GLORIA EXERCITVS (1 zastava) s natpisom na naličju FL CONSTANTIS BEA C (Siscija, LRBC 762, RIC VII 264 stupanj rijetкости R4). Novac kat. br. 1009 također je rijedak kov, odlično sačuvani AE3 Konstancija iz Siscijske kovnice s natpisom VICTORIA AVGGG (LRBC 789, RIC 181).

U skupnom nalazu postoji i mali broj imitacija (DEMO 1982: 211) novca Konstancija II.: 3 primjerka tipa FEL TEMP REPARATIO (konjanik koji pada) (kat. br. 1844–1846 C37995-7) i jedan primjerak tipa GLORIA EXERCITVS (1 zastava) (kat. br. 1843 C48233, Rim). Četiri hibrida tipa GLORIA EXERCITVS (2 zastave) (kat. br. 57–60) pripadaju licu novca Konstantina I. s natpisom CONSTANTINVS MAX AVG (LRBC 770, 335.–337. po. Kr.) a pripojeni su aversnim kalupima njegovih nasljednika iz kasnijeg razdoblja, 337.–341. god. po. Kr. (LRBC 770–775).

Novac br. 1580, cara Konstancija II. (337.–361.) tipa GLORIA ROMANORVM, iskovan u Sisciji, pokazuje nezabilježene prekide natpisa na naličju: GLORIA-R-O-MANORVM, umjesto uobičajenog prekida natpisa GLORIA-RO-MANORVM (LRBC 1220, RIC 355).

Oznaka kovnice kod Kat. br. 157 (Constantinopolis, kovnica Rim) pojavljuje se možebitno kao nepoznati simbol ☺, koji nije zabilježen ni u LRBC, ni u RIC (samo R☺ i R☺P poznati su kod LRBC 547).

Kat. br. 1396 također je jedan zanimljivi primjerak: novac Konstanta tipa FEL TEMP REPARATIO (Feniks), iskovan u Akvileji s oznakom kovnice varijante --//AQ•S• (LRBC ne bilježi tip s Feniksom za Akvileju). Tip s Feniksom poznat je samo u RIC-u (RIC 112, 348.–350. po. Kr.), ali kovnička oznaka AQ•S• nije poznata, samo su popisane AQP•, AQS• i AQT•. Na primjerku iz Treštanovačke ostave vidi se još jedna dodatna točka pred oznakom kovnice S, dodatno pojačana korozijom te tako taj primjerak postaje RIC112var. Pet siscijskih novaca nose nezabilježenu kovničku oznaku ☺ (kat. br. 1428–1430: Konstant, tip FEL TEMP REPARATIO (Feniks), LRBC 1134var, RIC 241var; također, kat. br. 1588, Konstancije II., tipa FEL TEMP REPARATIO (Galija), LRBC 1135var, RIC 2432var. Još jedna rijetka oznaka za oficinu (☺) može se vidjeti na pet novaca AE3 Konstanta iz Siscije (kat. br. 1500–1504 --//ASIS☺), i nije zabi-

Further, we may note cat. no. 195, Constantinopolis with Pax standing left, holding branch and transverse sceptre (Rome, LRBC 611, RIC 105 degree of rarity R4). Another rare specimen is cat. no. 309, a rare issue of Constantius II as Caesar (324–337) GLORIA EXERCITVS (1 standard) with obverse legend FL CONSTANTIS BEA C (Siscia, LRBC 762, RIC VII 264 degree of rarity R4). Coin cat. no. 1009 is a rare issue, an exceptionally well preserved AE3 of Constantius from Siscia mint with the legend VICTORIA AVGGG (LRBC 789, RIC 181).

Small number of imitations (DEMO 1982: 211) of Constantius II issues is present in the hoard: 3 specimens of FEL TEMP REPARATIO (Falling horseman) type (cat. nos. 1844–1846 C37995-7) and one of GLORIA EXERCITVS (1 standard) type (cat. no. 1843 C48233, Roma). Four hybrids of GLORIA EXERCITVS (2 standards) type (cat. nos. 57–60) feature obverse of Constantine I with legend CONSTANTINVS MAX AVG (LRBC 770 AD 335–337) coupled with the obverse dies of his successors from later period AD 337–341 (LRBC 770–775).

Coin no. 1580, Constantius II (337–361) of the GLORIA ROMANORVM type minted in Siscia, features an unrecorded die breaks on reverse: GLORIA-R-O-MANORVM, instead of the standard GLORIA-RO-MANORVM die break (LRBC 1220, RIC 355).

The mintmark of cat. no. 157 (Constantinopolis, Rome mint) appears as a possibly unknown symbol ☺, which is not recorded either in LRBC or in RIC (only R☺ and R☺P are known for LRBC 547).

Cat. no. 1396 is another interesting specimen, a Constans FEL TEMP REPARATIO (Phoenix) type minted in Aquileia with a mintmark variant --//AQ•S• (LRBC does not record the Phoenix type for Aquileia). The Phoenix type is known in RIC (RIC 112 AD 348–350), however, the mintmark AQ•S• is not known, only AQP•, AQS• and AQT• are listed. On the specimen from the Treštanovci hoard an additional dot before officina mark S is seen, further enhanced by corrosion, making this specimen RIC112var. Five Siscian coins bear an unrecorded mintmark ☺ (cat. nos. 1428–1430: Constans FEL TEMP REPARATIO (Phoenix) type, LRBC 1134var, RIC 241var; also, cat. no. 1588, Constantius II FEL TEMP REPARATIO (Galley) type, LRBC 1135var, RIC 2432var. Another rare officina mark (☺) could be seen on five AE3 coins of Constans from Siscia (cat. nos. 1500–1504 --//ASIS☺), not listed in LRBC, whereas RIC records them as RIC 235. It is obvious that officina mark ☺ on the coin from the same series (cat. no. 1505, --//BSIS☺) is actually erroneously executed ☺ mark (RIC 235var). Another error of officina mark could be read as ☺ (cat. no. 1508 Siscia --//ASIS☺), not listed in LRBC, and could be considered as RIC 246var; in which the ☺ mark has an

lježena u LRBC, dok ih RIC bilježi kao RIC 235. Očito je da je oznaka za oficinu Γ na novcu iz iste serije (kat. br. 1505, –//BSIS Γ) u stvari krivo izvedena oznaka Γ (RIC 235var). Još jedna krivo izvedena oznaka oficine mogla bi se čitati kao Υ (kat. br. 1508 Siscia –//ASISΥ•) i nije na popisu u LRBC te bi se mogla smatrati kao RIC 246var; gdje oznaka Υ ima još jednu dodatnu crtu. Naposljetku, na novcu kat. br. 1604 iz Tesalonike vidi se nezabilježena oznaka u polju Γ• umjesto već poznate oznake Γ•\* (Γ•//S\*TSΔ•, LRBC 1672var, RIC 174var). Ovdje je zvijezda ili slabo izvedena, ili je ta varijanta s točkom u polju nova oznaka. Na primjerku kat. br. 222 vidljiva je očita rezbareva greška, koji je zabunom urezao slovo S na aversu vodoravno umjesto okomito, pa se čita kao ∞.

additional line. Finally, coin cat. no. 1604 from Thessalonica features an unrecorded field mark Γ• instead of the known Γ•\* mark (Γ•//S\*TSΔ•, LRBC 1672var, RIC 174var). Here a star is either badly executed, or this variant with a dot in the field presents a new field mark. An unusual die engravers error is clearly seen on the specimen cat. no. 222, which has an erroneously cut letter S on the obverse, positioned horizontally instead of vertically, reading as ∞.
